

You are Agent 1 - The Architect. Create MULTI_AGENT_PLAN.md and initialize the project structure.

I'll create the MULTI_AGENT_PLAN.md file to initialize the project structure.

```
• Write(MULTI_AGENT_PLAN.md)
  | Wrote 113 lines to MULTI_AGENT_PLAN.md
  | # Multi-Agent Workflow Plan
  | ## Portal dla Serwisu Samochodowego
  | **Project Type**: Local MVP Web Application
  | **Date Initialized**: 2025-09-29
  | ---
  | ## Agent 1 - The Architect (Research & Planning)
  | _ +103 lines (ctrl+o to expand)
```

Role Acknowledgment: I am Agent 1 - The Architect responsible for Research & Planning for local MVP web application

✓ MULTI_AGENT_PLAN.md has been created and the project structure is initialized.

The plan establishes:

- Clear roles for all three agents
- Communication protocols between agents
- Status tracking system
- Decision log for architectural choices
- Next steps for each agent

Ready to proceed with requirements gathering and architecture planning for the Car Service Portal.

Powered with Next Steps

```
• Bash(ls -la)
  | total 32
  | drwxr-xr-x  5 konradwenc staff 160 29 wrz 21:23 .

  |
  | - [To be defined based on requirements]
  | + **MVP Focus**: Work Order Management, Customer Management, Basic Dashboard, Local Data Persistence
  |
  | + **Core Features**:
  | + - Create and manage work orders with line items
  | + - Customer and vehicle management
  | + - Status tracking (Intake → In Progress → Ready → Delivered → Completed)
  | + - Invoice generation
  | + - Dashboard with key metrics and alerts
  | + - Local data storage (IndexedDB) with export/import capability
  |
  | + **See**: REQUIREMENTS.md for detailed scope
  |
  | - [To be determined by Agent 1 after requirements gathering]
```

```
84 + - **Frontend**: React 18 + TypeScript
85 + - **Build Tool**: Vite
86 + - **UI Framework**: Tailwind CSS + shadcn/ui
87 + - **State Management**: Zustand
88 + - **Database**: Dexie.js (IndexedDB wrapper)
89 + - **Routing**: React Router v6
90 + - **Forms**: React Hook Form + Zod
91 + - **Testing**: Vitest + Testing Library
92
93 + **See**: TECHNOLOGY_STACK.md for complete stack details
94
95
96 - [To be documented by Agent 1]
96 + - **Local-First SPA**: All data stored in browser IndexedDB
97 + - **Offline-Capable**: No backend or cloud dependencies
98 + - **Single-User**: No authentication required
99 + - **Optimistic UI**: Update interface immediately, sync to DB asynchronously
100
101 + **See**: ARCHITECTURE.md for comprehensive architecture documentation
102
103
104
105
• Update(MULTI_AGENT_PLAN.md)
└ Updated MULTI_AGENT_PLAN.md with 30 additions and 6 removals
121
122
123
124 - ### Immediate Actions Required
125 - 1. **Agent 1**: Define project requirements and scope
126 - 2. **Agent 1**: Research and propose technology stack
127 - 3. **Agent 1**: Create initial architecture document
128 - 4. **Agent 2**: Stand by for implementation specifications
129 - 5. **Agent 3**: Prepare testing environment and strategy
124 + ### Agent 1 (Architect) - COMPLETED ✓
125 + - ✓ Explored project structure
126 + - ✓ Defined requirements (REQUIREMENTS.md)
127 + - ✓ Researched and documented technology stack (TECHNOLOGY_STACK.md)
128 + - ✓ Created architecture document (ARCHITECTURE.md)
129 + - ✓ Updated MULTI_AGENT_PLAN.md with findings
130
131 + **Handoff to Agent 2**: All planning documents ready for implementation
132
133 + ### Agent 2 (Builder) - READY TO START
134 + **Sprint 1: Foundation* (Next)
135 + 1. Initialize Vite + React + TypeScript project
136 + 2. Install core dependencies (see TECHNOLOGY_STACK.md)
137 + 3. Configure Tailwind CSS
138 + 4. Set up shadcn/ui components
139 + 5. Create basic routing structure
140 + 6. Set up project folder structure
141
142 + **Sprint 2: Data Layer**
143 + 7. Configure Dexie.js database schema
144 + 8. Create TypeScript types/interfaces
145 + 9. Implement Zustand stores
146 + 10. Add persistence middleware
147
148 + **Sprint 3-5**: Feature implementation (see ARCHITECTURE.md for detailed sprint plan)
149
150 + ### Agent 3 (Validator) - STANDBY
151 + - Await Sprint 1 completion
152 + - Review testing strategy in ARCHITECTURE.md
153 + - Prepare to validate Foundation layer once implemented
154
155
156
157
• Update(MULTI_AGENT_PLAN.md)
└ Updated MULTI_AGENT_PLAN.md with 21 additions
162
163
164
165 + ### Decision #002 - Technology Stack Selection
166 + - **Date**: 2025-09-29
167 + - **Agent**: Agent 1
168 + - **Decision**: React + TypeScript + Vite + Zustand + Dexie.js
169 + - **Rationale**: Modern, lightweight stack ideal for local-first SPA. React for component architecture, Zustand for simple state management, Dexie.js for robust IndexedDB access
170 + - **Alternatives Considered**: Vue.js, Redux, PouchDB (see TECHNOLOGY_STACK.md)
171
172 + ### Decision #003 - Local-First Architecture
173 + - **Date**: 2025-09-29
174 + - **Agent**: Agent 1
175 + - **Decision**: All data stored in browser IndexedDB, no backend
176 + - **Rationale**: User requirement for full data control, offline capability, and simplicity
177 + - **Trade-offs**: No multi-device sync in MVP, browser storage limits (~50MB)
178
179 + ### Decision #004 - MVP Scope
180 + - **Date**: 2025-09-29
181 + - **Agent**: Agent 1
182 + - **Decision**: Focus on Work Orders, Customers, Dashboard; defer Inventory and Scheduling
183 + - **Rationale**: Core job-to-be-done is managing repair orders. Other features can be added in future phases
184 + - **Impact**: Faster time to MVP, validates core workflow before expanding
185
186
187
188
Agent 1 Planning Phase Complete ✓
Documents Created:
1. ✓ REQUIREMENTS.md - Full MVP requirements with user stories, data models, and success criteria
2. ✓ TECHNOLOGY_STACK.md - Complete tech stack with rationale (React + TypeScript + Vite + Zustand + Dexie.js)
3. ✓ ARCHITECTURE.md - Comprehensive architecture including data flow, component structure, and implementation sprints
4. ✓ MULTI_AGENT_PLAN.md - Updated with project overview and agent status
Key Decisions:
- Application: AutoServe - Local-first car service management portal
- Architecture: Single Page Application with IndexedDB storage
- MVP Scope: Work Orders, Customers, Dashboard, Data Export/Import
- Tech Stack: Modern, lightweight, offline-capable
Handoff to Agent 2: All planning documents ready. Agent 2 can begin Sprint 1 (Foundation) to initialize the project and set up core dependencies.
